

**Job Description:**

This position is for a senior full stack java developer in the 6 to 9 years experience range. You'd be working on cutting edge technologies and responsibilities will involve direct client communication and on-call support on a rotational basis. You'd also be handling a team of mid-level experienced developers and interns. Your responsibility will also include requirements gap analysis and designing/architecting final technical solutions.

**Job Location:**

Ahmedabad or Remote (Work from Home)

**Key Skills:**

- Experience in Java / Java EE based enterprise applications
- Spring MVC, Boot, Security, JDBC
- SQL, MySQL
- Should have very good verbal and written communication skills, as you'd be communicating directly with the client
- Should be able to follow clean code practices and able to create good documentation

**Desired Skills:**

- Hand on working experience on responsive web design using HTML5, CSS/LESS/SASS, Bootstrap, JQuery, ReactJS
- Python basics
- AWS (API Gateway, Lambda, ECS, SNS, SES, SQS, S3, DynamoDB, RDS, EC2, Cloud Formation, CLI)
- Knowledge on .Net would also be a plus
- Jenkins and setting up build/test/deployment pipelines
- Experience with ubuntu linux, docker and writing bash scripts
- Best coding practices using tools like sonar and code coverage using EclEmma, Corbertura
- Unit testing using JUnit, Mockito
- Automation testing using Selenium
- Load testing using JMeter
- Integration testing

**Desired Experience in various IDE and Build Tools:**

- Maven, Jenkins
- Eclipse, VS Code
- Git, Mercurial
- Jira, Confluence, Bitbucket, GitHub

**Desired Team/Project management skills:**

- Experience in scrum based agile practices (sprint planning, backlog grooming, retrospective, timesheet management, sprint demo etc.)
- Experience in handling/mentoring a small team
- Experience in client communication and 24x7 on call support
